Information Communications Technology (ICT)

Your indispensable guide to industry
best practice in ICT

ICT Standards and Publications from BSI

“Dependence on IT systems remains high – only one in six small companies would be able continue their business without IT.”

Source: BERR Information Security Breaches Survey 2008

BSI has the answers you need

Because your business is dependent on ICT, it is essential that your organization implements and manages these systems effectively.

BSI publishes a wealth of information covering the ICT area to help you achieve industry compliance and best practice. This includes national and international standards, guidance documents and multimedia solutions – all ensuring that your organization’s ICT is well managed and meets your business needs.

Information Governance

Information Security

Information security protects information from a wide range of threats in order to ensure business continuity, minimize business damage and maximize return on investments and business opportunities.

Information security is achieved by implementing a suitable set of controls, which could be policies, practices, procedures, organizational structures and software functions.

BS ISO/IEC 27005:2008 Information technology. Security techniques. Information security risk management

This international standard provides guidelines for information security risk management (ISMS) in an organization, supporting in particular the requirements of ISO/IEC 27001.

BS ISO/IEC 27001:2005 Information technology. Security techniques. Information security management systems. Requirements

This international standard will provide a specification for ISMS within the context of the organization's overall business risks and the foundation for third party audit and certification.

It will also ensure effective information security management is established and maintained through a continual improvement process, and will implement the OECD principles governing the security of information systems and networks.

BS ISO/IEC 27001:2005 supersedes BS 7799-2:2002.

Guidelines on Requirements and Preparation for ISMS Certification Based on ISO/IEC 27001

Ted Humphreys and Angelika Plate

This book provides guidance to users of BS ISO/IEC 27002 (17799) and BS ISO/IEC 27001 on the 'Plan, Do, Check, Act' model and the ISMS process requirements for organizations preparing for accredited certification to BS ISO/IEC 27001. This guide has been updated to include new references and definitions, and additional information about the latest developments regarding certification criteria and other related standards developments. This book replaces PD 3001.

Are You Ready for a BS ISO/IEC 27001 Information Security Management Systems (ISMS) audit?

Ted Humphreys and Angelika Plate

This book has been completely revised to bring it in line with BS ISO/IEC 27002 (17799) and BS ISO/IEC 27001. It includes an ISMS process check and a gap analysis workbook. This guide is intended primarily for use by organizations seeking to prepare for certification to BS ISO/IEC 27001. System developers may also find it a useful reference document when considering the security aspects of new systems. This book replaces PD 3003.

Information Governance

IT Network Security

While the Internet facilitates information exchange and is a fundamental component of the way many organizations do business today – it can also provide those with malicious intentions a direct route to your computer networks and data. Without adequate security, your systems are vulnerable.

BS 25777 Code of practice for ICT continuity

This is the new key standard for ICT continuity management. If your business depends on information and communication technology (ICT) then BS 25777 will help your organization plan and implement an ICT continuity strategy.

ICT continuity management supports the overall business continuity management (BCM) process of an organization. BCM ensures that your organization's processes are protected from disruption and are able to respond positively and effectively when disruption occurs.

Data Protection and Freedom of Information

NEW STANDARD FOR 2009

BS 10012:2009 Data protection. Specification for a personal information management system

This British standard specifies the requirements for a personal information management system (PIMS), which provides an infrastructure for among other things maintaining and improving compliance with the Data Protection Act (DPA) 1998.

It should enable organizations to put in place a personal information management system (PIMS) that provides an infrastructure for maintaining and improving compliance with amongst other things the requirements of the Data Protection Act 1998 (DPA).

BS 10012 is for use by organizations of any size, in both the public and private sectors. It is for those responsible for initiating, implementing and maintaining a PIMS within an organization. BS 10012 aims to provide a common ground for the management of personal information for providing confidence in its management, and for enabling an effective assessment of compliance with amongst other things the DPA by both internal and external assessors.

NEW BOOK FOR 2009

Data Protection: Guidelines for the Use of Personal Data in Systems Testing (2nd Edition)

Louise Wiseman and Jenny Gordon

This book provides guidelines in an area where few documented processes exist – the use of live personal data in system testing, in compliance with the Data Protection Act 1998. The book will be useful for anyone responsible for data protection compliance, making it easier to achieve and monitor.

- Fully updated content, in line with the new standard for data protection BS 10012
- References to guidance issued by the Information Commissioner's Office (ICO)
- Guidance on governance and audit including reporting/handling of data protection breaches
- Templates to aid application of the guidance
- Examples include a testing policy and a testing approval form.

Essential reading for anyone using personal data in systems testing. Also useful for companies to see how testing might fit with the personal information management system (PIMS).

NEW EDITION FOR 2009

Data Protection Pocket Guide: Essential Facts at Your Fingertips. 2nd Edition. Nicola McKilligan and Naomi Powell

This book is a user-friendly guide for anyone who needs to know about the issues involved in data protection. The new edition reflects all the changes that necessitated the publication of BS 10012 Specification for the management of personal information in compliance with the Data Protection Act 1998, including a new chapter on operating CCTV and guidance on modern dilemmas such as using social networks like Facebook and YouTube for business purposes.

It includes updated case studies that reflect current issues, and troubleshooting sections giving practical advice on what to do in common situations that a busy professional may experience, whatever sector or size of their business.

Real-life case studies bring the subject to life and provide useful material for an organization's training and awareness programme.

Reviews of the first edition

"This is a pocket battleship of basic data protection information with which all information security professionals should be familiar when advising or employed in organizations."

ISSG Magazine, Information Security Specialist Group of the British Computer Society

"... a very good piece of work. It is comprehensive and reads easily. The clear non-technical style reflects what we are seeking to produce in our own revised guidance."

Information Commissioner's Office (ICO)

Information Governance

Evidential Weight and Legal Admissibility

Legal admissibility concerns whether or not a piece of evidence would be accepted by a court of law. To ensure the admissibility, information needs to be managed by a secure system throughout its lifetime (which can be for many years). Where doubt can be placed on the information, the evidential weight may well be reduced, potentially harming the legal case.

BS 10008:2008 Evidential weight and legal admissibility of electronic information. Specification

BS 10008 is the British Standard that specifies the requirements for the implementation and operation of electronic information management systems, and to the electronic transfer of information from one computer system to another, addressing issues relating to the authenticity and integrity of the electronic information. These issues are important where the electronic information could be used as evidence.

BS 10008 also specifies the requirements for the management of the availability of the electronic information over time.

It applies to electronic information in any form.

BS 10008 is available in two formats:

Evidential Weight and Legal Admissibility of Information Stored Electronically. Code of Practice for the Implementation of BS 10008. Alan Shipman

There is a direct requirement for all public bodies to implement the code of practice.

This code of practice recognizes the growth in electronic information management systems, and the continuing uncertainty about the legal acceptability of information stored on these systems.

This document provides good practice guidance for the electronic creation, storage and retrieval of information.

Software and System Engineering

Software engineering is the application of a systematic, disciplined, quantifiable approach to the development, operation, and maintenance of software. Software engineering covers not only the technical aspects of building software systems, but also management issues, such as directing programming teams, scheduling, and budgeting.

BS ISO/IEC 26514:2008 Software and systems engineering. Requirements for designers and developers of user documentation

This international standard aims to assist users of BS ISO/IEC 15288:2008, Systems and software engineering. System life cycle processes, or ISO/IEC 12207:2008, Systems and software engineering. Software life cycle processes, to design and develop documentation as part of the software life cycle processes. It defines the documentation process from the documentation developer's standpoint.

BS ISO/IEC 16085:2006 Systems and software engineering. Life cycle processes. Risk management

BS ISO/IEC 16085:2006 describes a process for the management of risk during systems or software acquisition, supply, development, operations, and maintenance.

The purpose of this standard is to provide suppliers, acquirers, developers, and managers with a single set of process requirements suitable for the management of a broad variety of risks and is suitable for adoption by an organization for application to all appropriate projects.

BS ISO/IEC 16085:2006 supersedes BS ISO/IEC 16085:2004.

TickIT Guide (Issue 5.5)

Improving the quality of software and its application

TickIT has been developed as a companion document to BS EN ISO 9001, so that software organizations have an up-to-date IT interpretation of this standard. It is essential that software works well together and is relatively easy to customize to your particular applications. It helps software suppliers, including in-house developers, define and implement a quality system which covers all the essential business processes in the software product life cycle. TickIT guides the developer to achieve this objective within the framework of BS EN ISO 9001.

Software Asset Management

Losing track of what software you have, where it's running or whether there is a licensing overlap can be a problem if processes are not in place.

Software Asset Management (SAM) no longer means carrying out the ad hoc inventory when needed, instead it requires a structured approach to recognize your software assets and manage them so that they work best for you. SAM is essential to protecting your organization's software.

BS ISO/IEC 19770-1:2006 Software Asset Management Processes

BS ISO/IEC 19770-1:2006 establishes a structured baseline for organizations to implement an integrated set of processes for SAM. The aim of the standard is to help you achieve good practice and manage your software more efficiently so that management and other organizations can be confident of the quality and adequacy of your processes.

BS ISO/IEC 12207:2008 Systems and software engineering. Software life cycle processes

BS ISO/IEC 12207 is the first international standard to provide a comprehensive set of life cycle processes, activities and tasks for software that is part of a larger system, and for stand-alone software products and services.

It establishes a common framework for software life cycle processes, with well-defined terminology, that can be referenced by the software industry. It contains processes, activities, and

tasks to apply during the acquisition of a software product or service and during the supply, development, operation, maintenance and disposal of software products. Software includes the software portion of firmware.

British Standards Online (BSOL)

British Standards Online **BSOL**[™]

British Standards Online (BSOL) is BSI's flagship database of standards. Used by professionals around the world, it is the most comprehensive and authoritative source of British, and adopted European and international, standards.

From an international perspective, access to the European Union through British Standards Online is your organization's gateway to Europe. Compliance to legislation such as New Approach Directives and single point access to the official English version of harmonized standards, means you can trade more effectively in those markets, as your products meet the relevant requirements.

BSOL is the authoritative collection of standards, and using standards can help you and your organization to:

- Improve your products or services
- Reduce costs
- Attract new customers
- Increase your competitive edge
- Inspire trust and confidence
- Improve quality and performance lessening the likelihood of mistakes
- Make products compatible
- Encourage international trade.
